About Me

After dedicating over 12 years to running my own business, where I took on various roles with high levels of responsibility and adaptability, I am now transitioning into a career as a **Junior Front-End Developer**. Over the past year, I have focused on mastering modern web development technologies, including **React.js**, **Next.js**, **Tailwind**, and **React Query** through hands-on projects and am eager to contribute to a team with my dedication and problem-solving abilities.

Skills

Languages

	Speak	Read	Listen	Write
Thai	Excellent	Excellent	Excellent	Excellent
Chinese	Fluent	Fair	Good	Poor
English	Good	Good	Very Good	Fair

Mar - Jul 2023

Onsite learning bootcamp 8 hours a day for 4 months

The Ultimate React Course 2024: React, Next.js, Redux & More.

Udemy

May-Nov 2024

Self-directed learning online at home

Projects

The Wild Oasis (for hotel staff)

Application for employee of a small boutique hotel

- Implement user log in feature
- Implement back end database using Supabase
- Provide a table view with all cabins, showing the cabin photo, name, capacity, price, and current discount as well as ability to create, edit and delete cabins
- implement reusable Modal component, Menu component and Table component using compound component pattern and render prop pattern
- Implement filtering and sorting options and pagination to enhance the user experience when viewing bookings and cabins data.
- Implement an overview dashboard with chart and statistics allowing user to quickly see important information for the last 7, 30, or 90 days
- Implement light mode and dark mode for display the application

The Wild Oasis (for online guests)

Online booking application for guests

- NextAuth.js is used to handle user authentication. Users can log in using their Google accounts. Secure authentication ensures user data is protected.
- Users can browse through a list of available cabins. Each cabin displays detailed information including images, descriptions, and pricing. The cabin data is remotely fetched from Supabase
- Users can reserve cabins directly through the application and are able to view, edit or delete all their past and future reservations.
- The reservation process is streamlined to be quick and user-friendly. and data is stored in a mock database on Supabase.
- Next.js is used to implement server-side rendering. This improves the performance and SEO of the application by pre-rendering pages on the server.

Fast React Pizza

Online pizza ordering

- User can order multiple pizzas from menu list, edit or remove menu from a cart, search for a pizza order ID and update it even after the order was placed
- Retrieve user's GPS location
- Responsive to small and large screen sizes using Tailwind
- Implement loading indicator, error handling, searching pizza order using Params
- Fetch and mutate remote data using loader, action, and fetcher provided by React Router DOM
- Create form validation
- Manage cart and user data using Redux and Redux Toolkit
